

Wireless Bluetooth headset instruction manual

ALASKA

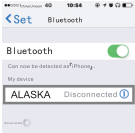

First Use

①Headphones on

Open the cover of the charging box, turn on the headset, connect the left and right ear to each other, and then the main ear automatically enters the through-pairing mode and tries to connect back to the phone

②ios&Android

Turn on Bluetooth and Search for Bluetooth Device "ALASKA". Connect the device manually for the first time.

③Turn it off

In the connection of TWS, put the earphone into the charging box, close the cover and turn off the machine. When the earphone is not connected or the Bluetooth connection is disconnected, if there is no operation, the earphone will be shut off automatically after more than 3 minutes

Cue Note

Prompt entry	Cue Note
Turn it off	"beep."
We got a match	Beep, beep, beep
Back to back	Beep, beep, beep
Low battery alarm	"beep."

Features of the new TWS Bluetooth headset:

Using shared dual mode, master-slave switch, the phone at the same time transmission data flow to the ears, the signal will not be transmitted between the left and right ears. Compared to the forward mode, Laudat's transmission has the advantages of direct connection to both ears, no master and slave, high receiving sensitivity, good anti interference, etc. . Using this shared mode for transmission does not require the replacement of high platform mobile phones, and is compatible with IOS and android mobile systems. Since there is no forwarding required, the ears do not require double bandwidth, resulting in better sound quality and noise immunity.

Schema

Functions

① Function definition in call state
